

## Assembly Instructions

For detailed pictures, examples, and videos, visit our website at <https://cuttercompanion.com>

---

Your Cutter Companion is simple to assemble and comes in two main parts:

1. The flat plate which has small hooks to connect to the main body.
2. The main body which is already assembled with a transparent lid and slide-out supports for long cutting mats.

Simply set the main body flat on a table with the transparent lid upright. Lay the flat plate behind it and allow the small hooks to interlock on the back under the hinges. The hooks should be facing downward, not up. Next, set your cutter on the flat plate. The weight of the cutter will hold the hooks in place and keep it connected to the main body.
